

# VISION ARCHITECTURE

CREATIVITY | ELEGANCE | CURIOSITY | AWARENESS

# WHO WE ARE

Visionarchitecture is an independent, easily approachable, forward thinking architecture and build consultancy practice based in Chiswick. We help in realising the visions of homeowners and developers who are looking for innovative and efficient design solutions. We are a small and steadily growing business as we have developed a growing portfolio of private commissions within the residential and commercial sectors as well as fostering our own self-initiated projects. We put a lot of effort and enthusiasm in the work we do. Our work spans from pretty much all London boroughs to the home counties and we also undertake work on overseas projects. We are using the most advanced BIM software available today to ensure maximum accuracy, efficiency and buildability from the concept stage throughout all stages of the design.

# WHAT WE DO

## CONSULT

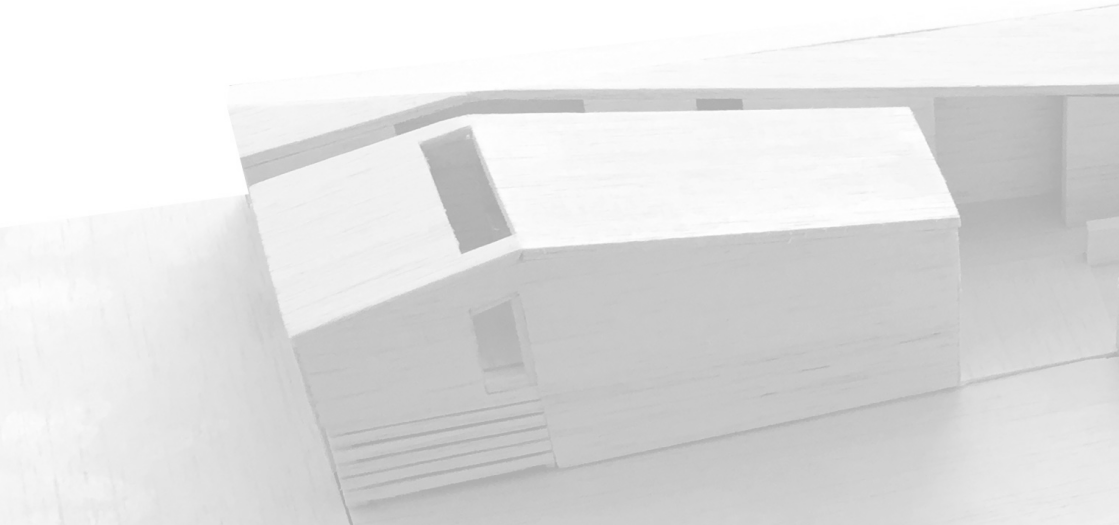

Are you a homeowner, a landowner or a developer?  
Are you an Architect looking to cooperate with us?

Get in touch, we would be happy to give you advice and share our wealth of experience.

## VISUALIZE

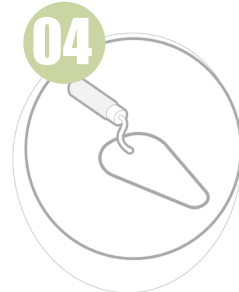

With almost two decades of global architectural visualisation experience in hand we can offer a stunning solution to your project at any stage. From small items to large projects we can model and deliver beautiful and realistic images that will speak for themselves.

## PLAN

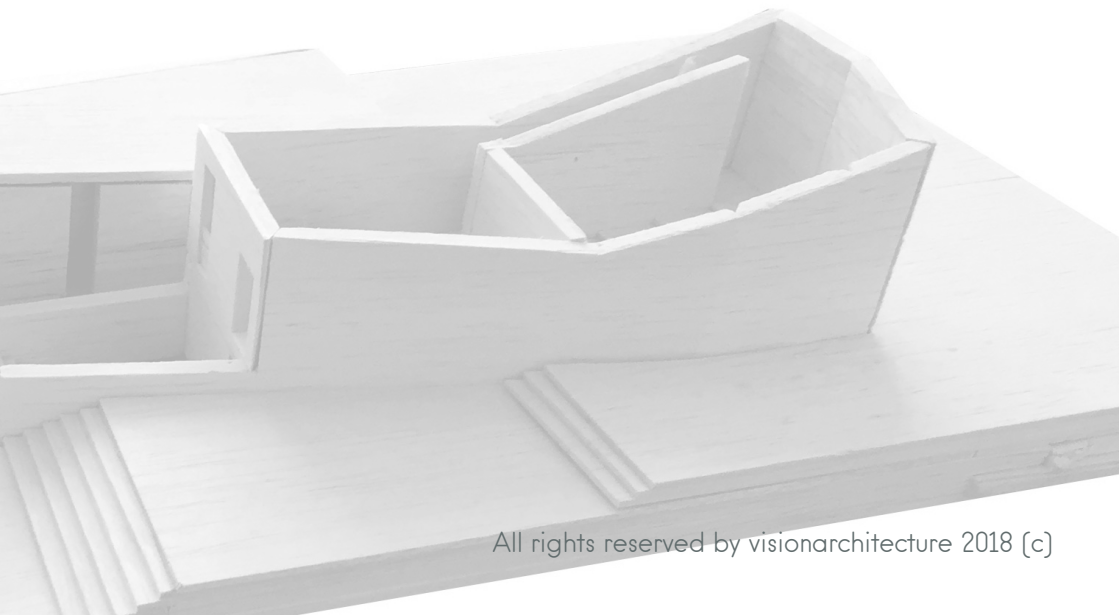

An extensive portfolio of completed residential projects make us more than capable of delivering you the quality work from site surveying to planning applications, building regulation plans, working details.

## BUILD

What is the benefit of our design and build arrangement?

The full control over cost and quality. Safeguarding your original vision from conception to completion. We provide a full turnkey service.

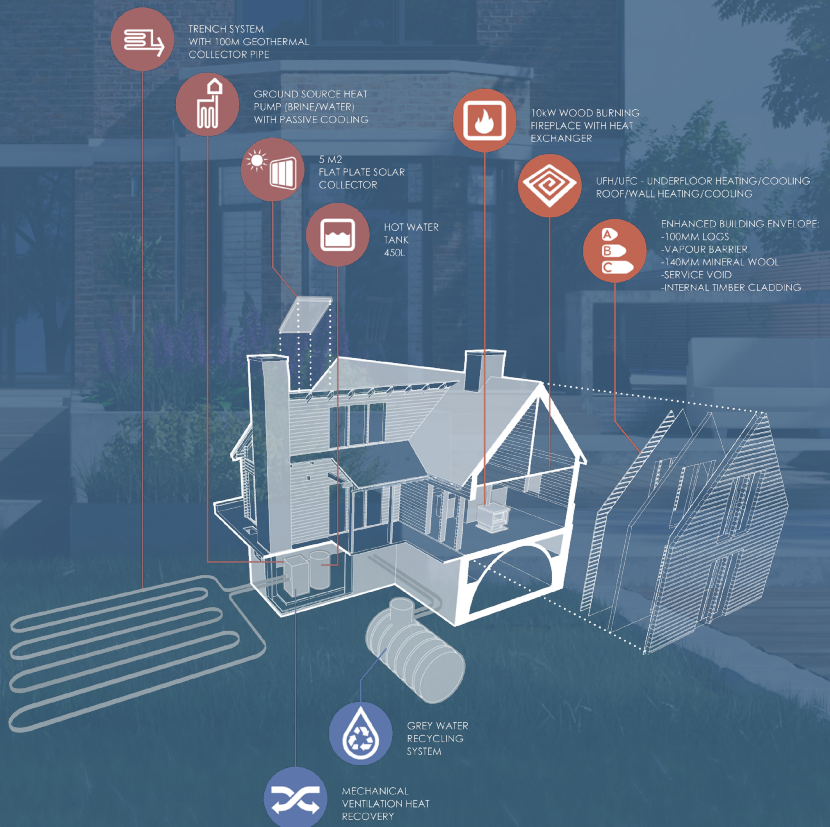

# HOW WE DO IT

Although we believe that the construction industry has to have the potential to be almost fully automated, the human factor will never be replaceable. This includes client relationships, listening, vision and innovation, empathy and social responsibility. We value these things profoundly.

A building should respect the heritage and equally reflect the local contemporary life. To solve local problems, we put them into a holistic perspective, the global point of view. Every project is different and no same approach can be adopted, hence innovation is at the core of our design process. We believe that smart design must be realised with sustainable technology creating maximum well-being within the constraints of budgets and functionality.
